# STOP! READ STEP 1 BEFORE APPLYING ANY DECALS

Large ID's™ apply slightly different, for installation instructions contact factory.

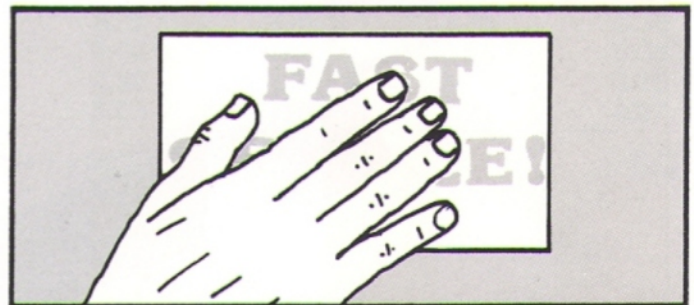

**CAUTION:** Remove all wax and dirt from area where decal(s) are to be applied. Make sure vehicle is at least 68° before starting application. Do not use power washer for at least 72 hours. In cold climate it will be necessary to move vehicle inside overnight to get proper temperature in the metal.

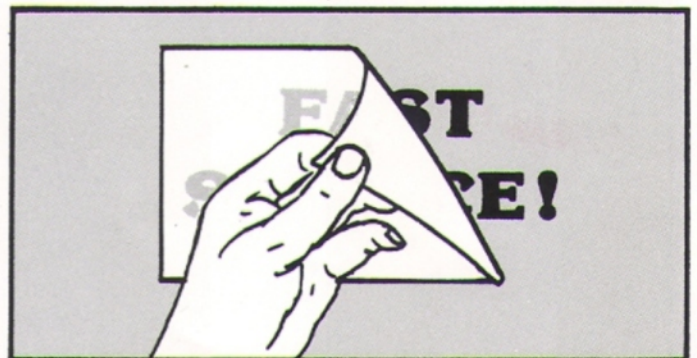

**Step 1.** Lay ID face down (masking tape down). Peel backing sheet off decal at a 180° angle (DO NOT PULL STRAIGHT UP). Peel backing sheet away slow and carefully. If letters try to lift from masking tape, lay backing sheet back down and rub total decal vigorously to build up heat so adhesive will release, then remove backing sheet.

**Step 2.** Position ID, complete with masking tape still on, where you want to apply it. Be careful you have no wrinkles in decal.

**Step 3.** Rub total masking tape area with extreme pressure over entire decal area for approximately one minute, or you are certain decal is affixed to desired surface. (The longer you rub decal will help in the release of the decal from the masking tape due to generated heat).

**Step 4.** Peel masking tape away from decal at 180° angle. If letters try to lift off while removing tape, replace tape and rub vigorously again, then remove tape.
